

# SPECIAL USE VALVES

## General

 Habonim's Special Use product line valves are subject to the general Habonim valves design, materials, practices, methodologies and certifications – for more information, see Valves General chapter.

 Habonim Special Use valves are equipped with the Total HermetiX integrity package for superior sealing, safety and environmental care.

Special use valves are Habonim valves that are specially adapted to be used and serve in applications that have unique requirements on one or more of the valve designs, materials in use, assembly, packing, testing or even certificating. Information on such applications and the valve adaptations are in the following pages. The full valve information is available on each valve series catalog chapter.

### Disclaimer & Warning:

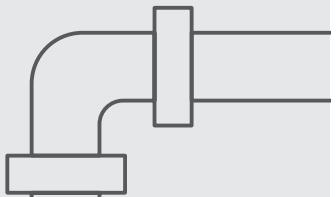

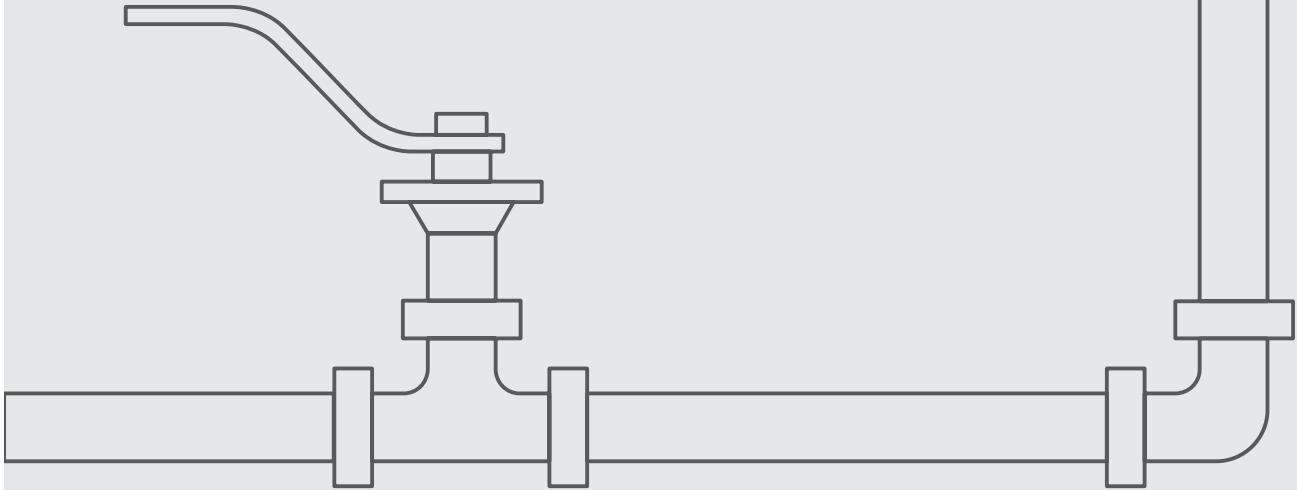

It is always the system designer and the end-user responsibility to verify all equipment use in their system is properly selected to ensure safety and integrity of their systems. Habonim offers only general information based on common market knowledge and standard market adaptations for its valves. For each system and use, the system designer and end-user must consider the particular operations conditions, media parameters and any other implication of their system for the proper selection of valves to be used on their sole responsibility.

Ammonia Service 12" Double Block and Bleed trunnion valve

# HYDROGEN SERVICE

## BALL VALVES

## Hydrogen Service Ball Valves (H)

Habonim's hydrogen service ball valves are designed and tested to provide safe and durable use within diverse hydrogen application and address some leading industrial standards. With decades of proven safe and long-lasting use in hydrogen applications Habonim Hydrogen-service ball valves delivers reliability and integrity for industrial demanding applications.

Habonim is offering a full range of ball valves for hydrogen-use based on the legacy products families to cover low to very-high pressures, shout-off or control use, regular, multiport, Double Block & Blead or custom-made designs, valve automation packages and much more.

### Hydrogen

Hydrogen light atomic weight and molecule structure turning hydrogen-use equipment sealing into a challenge requires special designs, mechanisms and expertise. Hydrogen is highly combustion and flammable making leakage prevention an essence for safety and integrity of systems and materials selection should consider hydrogen effects as Hydrogen Embrittlement (HE).

### Design

Habonim Hydrogen-use ball valves incorporate some design elements to best accommodate the hydrogen media:

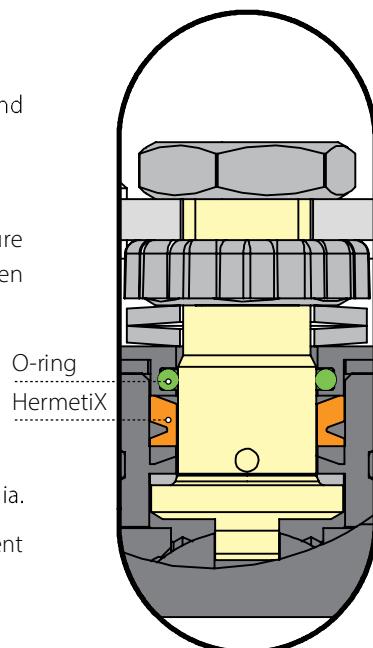

#### Double Stem Sealing

Habonim HermetiX patented stem seal is used with additional O-ring sealing.

The HermetiX polymeric, non-graphite stem seal design is certified for ISO 15848-1 and API641 fugitive emission prevention standards, tested with He.

An additional O-ring stem seal is added as additional sealing point.

This design has been successfully tested for 100,000 open/close cycles under pressure without any maintenance or seals replacements and well performs in demanding hydrogen applications for decades.

### Hydrogen-use material compatibility

All material used for the valve constructions are specified for safe use with hydrogen media.

Metallic materials to be used in the valves are selected to withstand the hydrogen embrittlement effects and are compatible for hydrogen use.

### Testing & Certifications

Some of the ball valves series are tested or certified for specific standard relevant for hydrogen use such as:

ISO 19880-3:2018 Gaseous hydrogen – fueling stations valve

TPED – Transportable Pressure Equipment Directive

Marine classification (on demand): DNV GL, LR, BV, ABS, KR, RINA

# Hydrogen Service Ball Valves (H)

## Total HermetiX integrity package

### Materials selection for Hydrogen use

Unless explicitly specified in our Ordering Codes for Hydrogen Service, when using our valves for Hydrogen Service (Feature "H") material selection should be:

- Body & ends - Stainless steel.
- Inner seal - Viton or consult Habonim.

### Zero fugitive-emission stem sealing

- HermetiX stem sealing design with zero fugitive emission sealing capability.
- Tested according to ISO 15848-1 and API641 standards.
- Up to 500,000 cycles of operation with no maintenance.
- Field proven for millions of cycles.

### Double body sealing

- Body double sealing for superior atmospheric sealing.
- Fugitive emission prevention.

### Fire safe

- Design compatible with API 607 and ISO 10497.
- Clean fire-safe construction for no graphite contamination of the media flow.

### Inline superior sealing

## Quick Selection Table

## Hydrogen Service High Pressure Trunnion Ball Threaded body

### Technical Information

#### Operation

Maximum Working pressure 1,000bar (15,000psi).

Working temperature: -40°C up to +260°C (-40°F up to +500°F).

#### Design

- Threaded body
- Trunnion ball
- Automation-ready with standard ISO 5211 connecting plate
- Total HermetiX Integrity package with:  
ISO 15848-01 and API 641 emission standard certificated design  
ISO 10497 and API607 fire-safe standard certificated design  
Double body sealing

#### End connections

# Hydrogen Service High Pressure Floating Ball 3 Piece Threaded-Body

## Technical Information

### Operation

Maximum Working Pressure: 550bar (8,000psi)  
Working temperature: -40°C up to +85°C (-40°F up to +185°F).

### Design

- Threaded body
- Automation-ready with standard ISO 5211 connecting plate
- Total HermetiX Integrity package with:
  - ISO 15848-1 and API 641 emission standard certificated design
  - ISO 10497 and API607 fire-safe standard certificated design
  - Double body sealing

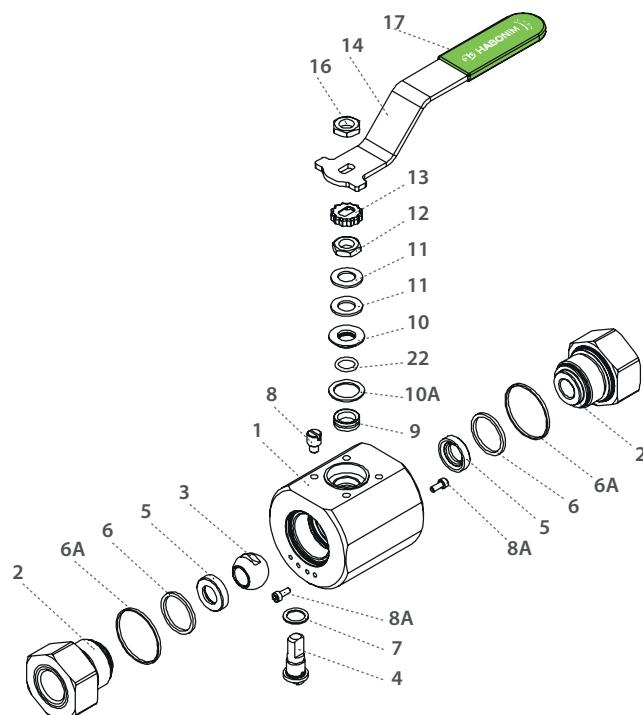

### Testing & Certifications

- TPED Certified, up to 550bar (8,000psi) MWP
- 100% shell & inline leak tested
- Marine classification (on demand): DNV GL, LR, BV, ABS, KR, RINA, others

### Materials

- Stainless steel body & ends
- All materials compatible for Hydrogen use
